SUMMARY

MSc student in Quantitative Economics (Data track) at Université Paris Dauphine-PSL, with a double bachelor's degree in Mathematics and Economics from Université Paris-Saclay. Strong background in probability, statistics and econometrics: I build models from scratch in Python and R, test them against theory and publish reproducible code on GitHub. **Seeking a data science, machine learning or quantitative research internship.**

EDUCATION

Université Paris Dauphine-PSL **Paris, France**

Master's in Quantitative Economics (Data Track) *Sept. 2026 – Present*

- **Relevant coursework:** Machine Learning, Macroeconometrics (Forecasting, Vector Autoregressions), Matlab, Data Management (SQL, R, Quarto, Git), Optimization and numerical methods, Unsupervised learning, Programming and web data collection

Université Paris-Saclay ***(2nd worldwide in Mathematics, Shanghai Ranking 2025)*** **Orsay, France**

Double Degree in Mathematics and Economics (240 ECTS credits) *Jan. 2024 – May 2026*

- **Relevant coursework:** Probability, Statistical Inference, Numerical Analysis (Python), Advanced Linear Algebra (Krylov Methods), Econometrics, Algebra and Calculus

PROJECTS

- **Neuro-AI Research Hackathon – HABS / Université Paris-Saclay:** Applied AI project in neuroscience using real EEG data – signal preprocessing, exploration of Machine Learning methods, and development of a team-built data processing pipeline.
- **Markov Chains – Mixing Times of Card Shuffles (Python):** Exact total-variation distance to uniformity for a 52-card deck via a lumping argument (no enumeration of 52! states); showed the textbook stopping-time bound is about 50% too pessimistic; 22 unit tests against brute force, CI. [code]
- **Panel Econometrics – Asylum Destination Choice (Python, R):** Gravity model on 39k observations; implemented fixed-effects OLS and Poisson PML (IRLS, clustered standard errors) from scratch, replicating R/fixest; showed that a key OLS result was a functional-form artifact. [code]
- **Image Processing (C++):** Image processing methods based on linear algebra and convolution filters for visual feature extraction.

PROFESSIONAL EXPERIENCE

EY (Ernst & Young) **Tunis, Tunisia**

Technology Strategy & Transformation Consulting Intern *June – Aug. 2025*

- Developed a system dynamics model to quantify the financial and environmental impact of the IT asset lifecycle.
- Used Python (NumPy, Matplotlib) to simulate asset lifecycles and visualize long-term trends; contributed to an infrastructure optimization study.

Université de Lille, Scientific Campus **Lille, France**

Mathematical Research Intern (Maths C pour L) *May 2026*

- Research on the abelian sandpile model on $\mathbf{Z}^2$: proved order-independence of topplings and bounds on avalanche propagation; built a tested Python simulator verifying the results. [code]

SKILLS & CERTIFICATIONS

Programming: Python (NumPy, Pandas, SciPy, Matplotlib, pytest), R (tidyverse, fixest), SQL, C++, Matlab, LaTeX, Git & GitHub Actions

Activities: Member of Dau'IA (Dauphine AI association): hackathons, Dauphine Digital Days, conferences

Certifications: Machine Learning for Healthcare (Stanford), AI Certificate (DATAIA Institute)

Languages: French (native), Arabic (native), English (C1 – TOEFL 104/120), Spanish (beginner)

International: Lived in 4 countries (Bahrain, Saudi Arabia, Tunisia, France) – over 10 years abroad
